1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1, 2, 4 and 7-12 are rejected under 35 U.S.C. 102(e) as being anticipated by masucci et al (6,592,272). Masucci et al discloses an optical transmission line (114), an optical line terminal (110), a first plurality of optical network units (112-1,112-4,112-7), a first wavelength (λ_1), a second plurality of optical network units (112-2,112-5,112-8), a second wavelength (λ_2), a first optical receiver (210-1), a second optical receiver (210-2), and recovery circuits (212).

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 3, 5 and 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Masucci et al (6,592,272).

It is well known in the art to use WDM to combine signals of different wavelengths into a common optical line since WDM is easy to install, inexpensive and

provides high optical coupling efficiency. It is also well known in the art to include buffers in a multiplexer for selectively buffering output data.

5. Claims 13 and 15-20 are allowed.
